NGUYỄN THANH TÂN

INTRODUCTION

I am a second-year student seeking an internship in Data Science. I am confident in my creativity, ability to work under pressure, and strong teamwork skills.

Tan Phu District, Ho Chi Minh City

SKILLS

Professional skills:

- Proficent at programming languages: C++, Python.

Soft skills:

- Research and information gathering.
- Teamwork and collaboration.
- Clear communication and presentation skills.
- Able to leverage AI tools to enhance work efficiency, generating innovative and breakthrough ideas.

EDUCATION

- **Studying at:** Ho Chi Minh City University of Technology, majoring in **Japanese-oriented Computer Science**
- **GPA:** 2.3/4.0
- **Language:**
  + TOEIC 685
  + Basic communication and document reading in English and Japanese.

CAREER OBJECTIVE

To gain practical experience and deepen my knowledge in Data Science, with the ultimate goal of becoming a Data Engineer by developing my skills and apply them for core projects.

WORK EXPERIENCE

Application of Deep Q Network in the Cutting Stock Project

- Utilized TensorFlow to develop the DQN model, training it on real-world data.
- Evaluated the model's effectiveness by assessing the reduction in material waste and the training time of the model.
- Outcome: Improved material waste reduction compared to traditional cutting methods.

Implementation of Dataset and Dataloader using xtensor

- Used xtensor to implement the Dataset and Dataloader classes in C++ for processing data in xarray format for Machine Learning tasks.
- Ensured compatibility with other deep learning libraries in C++, such as the TensorFlow C++ API.
- Outcome: Achieved high efficiency in processing and loading large datasets for Machine Learning models.
